IT Security – Consulting – Solutions –Outsourcing – Power – Data Center

I-NFINITE SOURCES LTD. CO. is an IT solutions company based in the Philippines, focusing on IT Security, Consulting, Solutions Delivery and IT Outsourcing.

In December of 2008, ISLC launched its newest product called **ISTHMUS®**. A complete Unified Threat Management Solutions, **ISTHMUS®** was designed and built for all types of organization who desire a complete solution for their infrastructure protection.

ISLC is operated and managed by people who have spent a combined 30 years in the IT industry, with focus on networks, IT security, compliance, project management, business intelligence and supply chain management within the financial and insurance sectors, consulting and software industries.

ISLC people who handle the implementation and services have proven experience and are certified in their lines of expertise to ensure that implementations are completed. In ISLC, we invest in training so that the skills or our people are continuously upgraded and updated.

ISLC is also following / working on an ISO 17799 certification and is currently using the ISO 27001 and BS7799 methodologies. We have tie-ups and partnerships with Certified Information Security Auditors in the Philippines and in the United States to ensure compliance our work.

ISLC do not just offer IT security products; ISLC assess your needs, determines your weakest point and will work with you based on this need. Making sure that your companies investments are maximized.

IT SECURITY PRODUCTS

ISTHMUS®

I-Nfinite Sources proprietary product, which functions as a UTM (Unified Threat Management) Solution that includes a firewall, a proxy server, an anti-virus, an anti-spam software, a VPN software, an Internet content filter, a LAN Intrusion Detection Software and an e-mail content software. Reasonably priced compared to its international competitors.

CONTROLGUARD

ControlGuard is a company founded on the idea of maintaining the integrity of company information in an age where portable devices are everywhere and computers are manufactured with an array of endpoint interfaces. ControlGuard is the pioneer in recognizing these factors and the lack of IT security solutions in this space and has stepped-up to create solutions that overcome the related challenges IT security faces in securing endpoints and with deploying data leakage prevention solutions.

INTERGUARD

Interguard the first security software suite that offers "One System" integrated protection for threats originating from within your organization (internal threats). It's security made simple – whether you use it on one computer or thousands. The Interguard Security Suite consists of a data loss protection module (Datalock), a laptop protection module (LaptopCop) and a gateway/content management module (Sonar).

CODE GREEN NETWORKS

Code Green Networks is a one of the leaders in delivering data loss prevention solutions that enable organizations around the world to protect confidential customer data and safeguard intellectual property. Code Green Networks are known to integrate with almost all of the proprietary equipments and solutions and is known to be the DLP Made Easy because of its easy implementation methods.

COMPUTER ASSOCIATES

CA carries different solutions to address management and reporting of the enterprise network for compliance purposes. CA is one of the biggest IT management software providers that unify and simplify complex IT environments in a secure and safe way.

ARCSIGHT

Arcsight is the 2009 Magic Quadrant awardee for the best security information and event management. Arcsite's focus is on real-time event management and reporting, log monitoring and compliance automation which are more needed on compliance management. Compliance is a critical concern for almost every organization. The specter of regulatory penalties for non-compliance - along with the resultant brand damage, loss of trust and potential lawsuits – has made compliance a burning issue.

What's more, companies are expanding the scope of their compliance initiatives beyond the letter of the law to proactively safeguard their assets and protect the integrity of their processes and policies. However, demonstrating and maintaining compliance comes at a significant cost. That is why organizations need to minimize the labor and human-error component of compliance initiatives. By automating real-time monitoring and reporting across the full range of audit, business and security controls, companies can dramatically lower the cost of compliance.

KASPERSKI ANTI-VIRUS

Kasperski Anti-Virus is one of the best and leading anti-virus, anti-spyware and malware solutions in the market today.

Its complete desktop and server security suite is widely known to detect the latest threats on the desktop and server level.

SOFTINVENTIVE NMS SOFTWARE

Among the best products of Softinventive Software are their Total Network Inventory Software and their Total Network Management Software, which makes managing IT resources easily.

I-INFINITE SOURCES IT SECURITY CONSULTING

VULNERABILITY TESTING

VA is a test of a system to locate, diagnose, and correct areas of weakness that might make it susceptible in times of crisis, attack, or destabilization. Any system that is created, operated, and shaped by humans may qualify for, and may in fact require, a vulnerability assessment.

PENETRATION TESTING

An activity that is intended to determine if there is a way to cause a computer system to fail to perform in the expected manner; it involves hypothesizing flaws that would prevent the program from enforcing security, and conducting experiments to confirm or refute the hypothesized flaws.

BUSINESS CONTINGENCY PLANNING

The aim of contingency planning is to minimize the effects of a disruption on an organization. A disruption is any security violation, man-made or natural, intentional or accidental, that affects normal operations.
